MANAGING DOCUMENTS

windream Dynamic Workspace

The ultimate software platform for all documents, processes, and applications

Modern application programs today are so complex that no user can fully manage their range of functions. Studies show that users use at most twenty percent of the entire range of functions and commands of an application. This applies not only to specialist applications, but also to standard office programs such as Microsoft Word and Excel.

In addition to these standard applications, a large number of other, specialist programs such as workflow, ERP, ECM or CRM systems are also used. The entire range of functions is simply no longer controllable.

So how would it be if you had a system that could overcome exactly this obstacle?

windream Dynamic Workspace - an uncompromising problem solver

windream Dynamic Workspace follows a consequently solution-oriented approach and is, without exception, tailored to the specific tasks which you as a user have to fulfil in a company. This includes the classic document management with a powerful retrieval module as well as the presentation of record structures with different contents or workflows which are linked to processes. With this feature, windream Dynamic Workspace can be used in different companies and departments - e.g. in industry, in the service sector, in accounting, in human resources or in production.

One of the biggest advantages of windream Dynamic Workspace is that the functions and respective user interfaces are always task-related. This means that windream Dynamic Workspace only provides those functions which you really need to complete a task. Not more, but also not less.

windream Dynamic Workspace offers an architecture which allows you to develop your own Dynamic Workspace solutions. These solutions can then be integrated into windream Dynamic Workspace.

What is so special about windream Dynamic Workspace?

-  The handling is easy, intuitive and opens up to you by itself.
-  With windream Dynamic Workspace, you can connect documents and contents with processes and business applications.
-  The application offers an interface which is tailored to your individual requirements and which can be configured in a flexible way.
-  windream Dynamic Workspace delivers exactly those data and documents which you need in the context of your current task.
-  Due to its high flexibility and extensibility, windream Dynamic Workspace allows you to create a customized presentation of use cases which also meet complex requirements.
-  windream Dynamic Workspace will accompany you, the „Mobile Worker“, in your daily work, no matter if you are in the office, at a customer's site, on the road or at home.
-  The user interfaces of the software are clearly arranged and not overloaded with a multitude of functions.
-  windream Dynamic Workspace offers you an inspiring user experience.

windream Dynamic Workspace solves the problem of function overload! This makes windream Dynamic Workspace unique and a trend-setting, uncompromisingly solution-oriented tool for the seamless integration of classic document management, digital business processes and specialist applications - without any unnecessary „command ballast“.

NUR ERGEBNISSE ANZEIGEN

It couldn't be more dynamic

While other systems require the programming of a new application or solution for the respective terminal device, with windream Dynamic Workspace this obstacle disappears as if by magic. The operating concepts of iOS and Android are taken into account. A web application is not simply executed on a tablet or mobile phone as it is often the case with other systems.

windream Dynamic Workspace works independently from a specific platform or end device. Furthermore documents and information can be accessed via a Smartphone, a tablet, a notebook or via a classic desktop PC. To ensure this multi-platform capability, windream Dynamic Workspace supports all common operating

systems like Android, iOS, Windows, Linux-derivatives and MacOS on the client side. For end devices with Android and iOS, dedicated apps are available in Google Play and in the Apple App Store.

Due to its enormous flexibility, windream Dynamic Workspace does not provide a rigid „app“ on a Smartphone, because you yourself determine which information you want to view or edit on the device in a specific situation. The entire windream Dynamic Workspace system is flexible and can be handled individually. It combines documents, processes and contents or application scenarios under one common user interface.

windream Dynamic Workspace overcomes system boundaries

As an innovative software platform, windream Dynamic Workspace meets exactly those requirements which you as a user expect from an IT-system. This means in concrete terms:

- You will become independent from rigid, permanently installed PC-workstations and extend your work horizon with an almost unlimited mobility.
- Make your entire company knowledge available at any location and at any time.
- With windream Dynamic Workspace, you can combine and unify most different use cases and scenarios as well as views on processes, documents and contents under one interface in a way that you can perform your tasks optimally.

Rely on the Technological Market Leader

If you plan to invest in an innovative, efficient and easy to handle ECM-system, or if you need further information on how to optimize your business processes concretely, we should get to know each other.

In the market sector of ECM-software suppliers, windream GmbH is the technologically leading manufacturer. With the windream ECM-system based on the patented Virtual File System technology (VFS), we have created an unrivaled tool for administering your complete company knowledge. Our software is easy to handle, effective, and future-proof. We have 20 years experience in successful software solutions development for enterprises of any size. Medium-sized companies and multinational corporations as well rely on our top quality products and on our technological know-how.
